

Our Credo

We the Founders and leadership of **Klarica** seek to build a global company delivering the most advanced solution for regularly performed clerical work.

We seek to extend the **current** systems being used with a secure, online platform for access by all stakeholders. This platform will include: a number of different dashboards showing required details; the ability to download/upload documents; a series of intelligent forms to initiate and automate processes; various reports and other useful, daily tools and updating of most databases.

The development of the **Protea** solution includes AI aided dashboard and form building tools. It offers an expanding **Template Library** for copying and editing the required solution for a speedy delivery.

Stakeholders securely register to access their dashboard. Forms processed can be lodged through an EDM library. Forms can be authorised, with e-signatures. Compliance details can be collected and emailed to the required parties for approval.
